

Custom Saw Bodies and Solid Tooth Blades

*Arbor Holes

We make arbor holes to the style and size you require. Most center holes are laser cut round, then machined to a tight tolerance, which varies with size. However, many arbor holes are laser cut only to match specific machine requirements, like spline arbors, Double D and Skil arbors. Following are illustrations showing the various arbor hole types available.

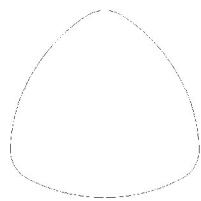

Retech

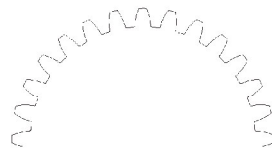

Involute

Round arbor holes are machined to tight tolerances.

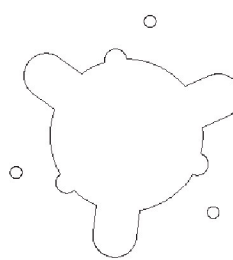

We continue to make new designs for customers who supply specs, drawings or samples. Here are some of the more unusual designs we've made recently.

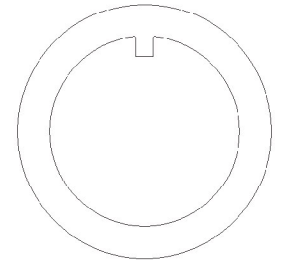

Delta

Special Spline

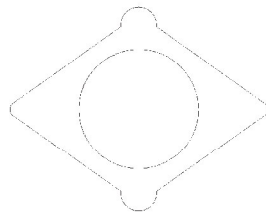

Multiple Keyways

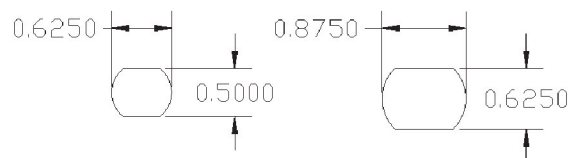

Male Keyways

Splined arbor holes for Retech, Involute, Delta and other Guided Edger Arbors.

Skil-KO

Skil – Knock Out arbor holes for the popular portable saws.

Double "D"

Double D design in two sizes for popular tree trimming and other saw machines.
